This Manifesto is grounded on face-to-face deliberations, which lasted more than 4,000 person hours implemented using the methodology of Structured Democratic Dialogue and data analysis using a number of approaches including, word/tag clouds, data mining and advanced visualzaition techniques, visual representations of the connection of topics of interest, multiple rounds of voting, term frequency analysis, interpretive structural modeling, clustering analysis and prioritization, and others.

A Manifesto for a Sustainable, Just and Ethical World

Roadmaps towards new systems of governance

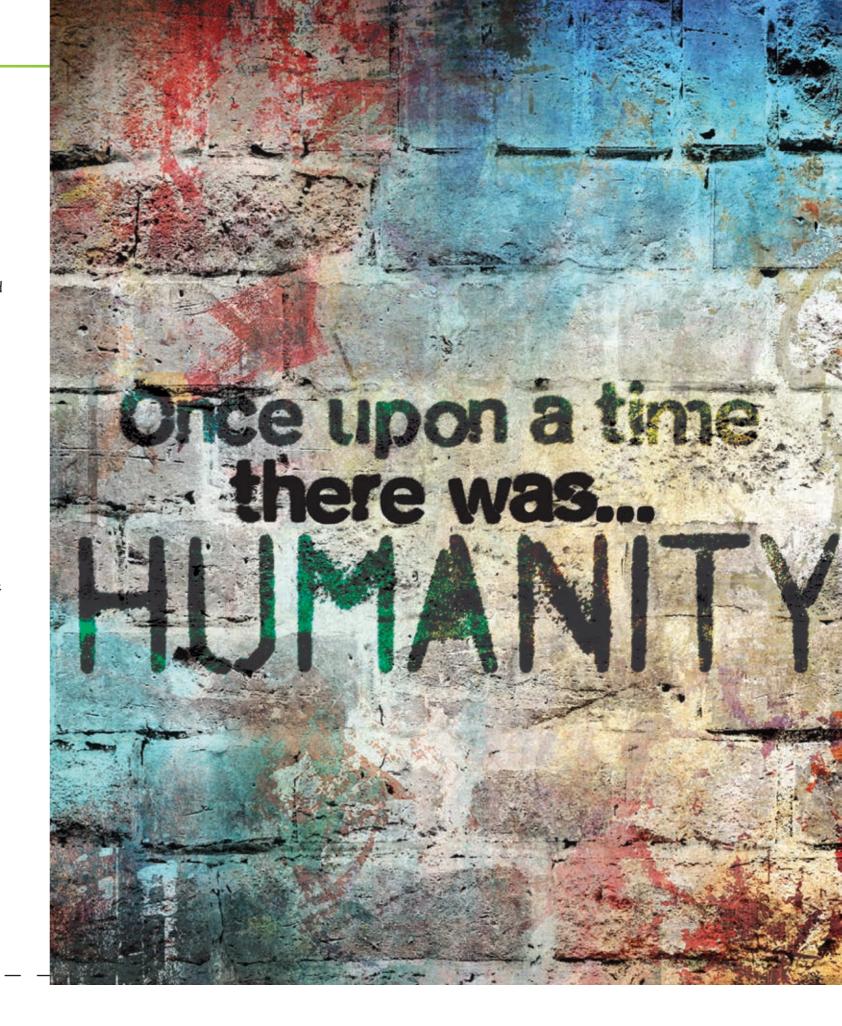

Preface

The dawn of the millennium marked half a century without armed conflict between the world's major powers; the longest period in the history of the modern system of states. It also marked unsurpassed developments in information and digital technologies. Yet, despite the enormous opportunities we as people have to thrive, the first decades of the 21st century are loaded with incidents of terrorism, international violence, military operations, abuses of human rights, and political conflicts. Civil wars and ethnic cleansings claimed millions of innocent lives. Nearly one third of all countries in the world have experienced some type of violent conflict during the first two decades of the new millennium. At the same time, the idea of democracy, defined as people holding the power to govern themselves (Greek: $\delta\eta\mu\sigma\kappa\rho\alpha\tau(\alpha;\delta\eta\mu\sigma\varsigma)$, which means "people", and $\kappa\rho\alpha\tau\sigma\varsigma$, which means "power", and thus means literally "people power") is continuously degrading, "sliding, engineless and rudderless, under the surrounding sea of dictatorship, and whether the dictation comes from a politburo or a junta will make no difference," as Willy Brandt stated in the cold war era years. Power and wealth concentrate in the hands of a handful of individuals, "elected" or members of large-corporations, whose decisions that influence the lives of people on earth as well as all living and non-living things, are not based on wisdom, but serve personal interests of the few. We, people on earth, have embarked on a dangerous path, which irreversibly leads humanity towards dark futures. It is overdue that we reestablish democracy in its true sense.

This Manifesto proposes that we use the benefits brought to us by the digital revolution to harness the wisdom of people from all walks of life, honor the needs, rights and aspirations of all living and nonliving things and design new systems of governance that guarantee a sustainability, justice and the survival of whatever we call human and values.

The proposed political reforms emerged through the application of dialogic design science, first identifying those factors that are root to current shortcomings, and subsequently discovering those deep drivers (i.e., reforms) that would guarantee positive change.

This Manifesto aspires to kindle worldwide open debates leading to mobilizations for the design and implementation of new systems of governance; systems that will guarantee the survival of humanity.

Highlights of the Manifesto

Participation of all Stakeholders

In the governing of human activities and relations is a matter of concern to all living and non-living creatures on earth and beyond. It is unethical to take decisions that affect the lives of people or the future of life on earth without the explicit permission and authentic participation of all those whose lives or futures are influenced. Indeed, the "Law Requisite Action" predicts that any action plans to reform complex social systems designed without the authentic and true engagement of those whose futures will be influenced by the change are bound to fail. It is therefore imperative that future systems of governance put in place mechanisms by which all relevant stakeholders can participate effectively in envisioning, deliberating, designing and deciding about future systems. Special attention should be given to future "owners of life" (i.e., the youth and the biosphere), women and other currently underrepresented groups (i.e., vulnerable groups, people with non-citizen status, etc.), organized civil society (i.e., participation beyond traditional political structures), as well as those who represent the "rights" of non-human beings (i.e., plant and animal life, bio-technical environment, oceans, earth, atmosphere, and space and matter beyond earth).

Effective Participation

- The constitutional right to directly and indirectly participate in political and public life, to vote and be elected, aims at eliminating marginalization and discrimination, as well as securing meritocracy and equal access to public service positions, fair, just, democratic, and effective decision-making, and good governance (§3) in the absence of corruption (§4). However, participation rights are inextricably linked to other human rights such as the right to peaceful assembly and association, to freedom of expression and opinion, and to education and information. Thus, effective participation is only possible when all relevant conditions are secured. The UN should ratify the "Right to Participate," along with all accompanying requirements for authentic and effective participation, as a basic human right.
- §2.1 Access to information is a Human Right: Freedom of information is an extension of freedom of speech, a fundamental human right recognized in international law. "Right to Information Acts," ratified by some national parliaments should be consolidated by the UN to elevate "access to information" to a basic human right. It should be extended to include freedom of expression in any medium, be it orally, in writing, print, through the Internet or through art forms and accompanied by measures that make access simple, efficient and meaningful.
- §2.2 Effective Access: Citizens should have access to information, knowledge and tools that empower them to act as "systems scientists" without having to know the theory and practice, just like astronauts who fly spaceships are not expected to command or comprehend all background science.
- §2.3 Open Data, Open Technologies: As our dependence on technology increases, so does the need for democratization of processes of their design and development. We must guarantee access and simplicity of interfaces and APIs that interact with public data.
- \$2.4 Participation at all levels: Democracy of the 21st century usually sadly refers to the right to take part in the high-level political processes such as electing presidents and members of parliaments or analogous, while at the Our societies should encourage cultivate participation from very young ages, at all forums, from local to global.

Effective Management and Governance in Public Spheres

- Whereas a license is required to drive a car in a public road, a clean criminal record is sufficient to put anyone on the driving wheel of a country. Ancient Athenians applied lottery to "elect" their representatives, because they believed that ethics and responsibility were more important than education. Today's complex challenges however require that those elected, as well as senior public servants have satisfactory knowledge, experience and skills, in addition to sound, and verifiable adherence to ethics and values. Moreover, the system should feature checks and balances and options for stakeholders' participation in decision-making (§1,2), beyond those designed centuries ago to serve centuries old systems of governance. Unlike any other physical or biological system, the systems of electing and monitoring representatives and other senior public servants lack the most rudimentary characteristic of any viable system. The magic words are "feedback," and "accountability."
- §3.1 Monitor, assess and optimize systems of governance: Systems of governance should utilize science and harness the digital era to provide more, faster, and efficient services to the citizens. Early detection of incidents of bureaucracy and failures is key.
- §3.2 Reduce confidentiality: Transparency at all levels of management and governance increases public trust, accelerates feedback, and enhances our ability to correct and optimize systems. Politicians' and senior technocrats' draft documents, bills, or activities, positions, voting and decisions should be published and made accessible (§2).
- §3.3 Revise systems of elections and representation: More often than not, those we elect to represent our interests and aspirations, fail to do so; even worse, they may even take advantage of their position to satisfy their own personal interests since monitoring, accountability, and effective punishment are absent (§4). Digital and block chain technologies can create real-time, secure, and anonymous "connections" between citizens and their representatives. The mandate should be revoked if a representative looses more than a weighted majority (e.g., >70%) of her supporters. Citizens could also engage in frequent, multiple, direct voting processes, without relying on intermediaries. Pros and cons, as well as threats of all new solutions should be considered and addressed (§2).
- \$3.4 Unethical behavior of elected or other officials is a criminal offence: Serving the interests and representing the aspirations of others is an act of trust, and its betrayal should have serious consequences.

Abolish Corruption

- 64 Corruption emerges when those in power become greedy and exploit system weakness for personal benefit. Greediness can be addressed, in a longer term, through educational reforms that develop empathy, teach ethics and values, train in mindfulness and meditation, and cultivate sustainable development. Technology can guarantee processes that are efficient (§3), secure fully transparent, can be monitored at all stages by those in charge as well as the public at large, are resilient to exploitation, and provide early detection of violations.
- §4.1 Transparency Citizens have unrestricted access to all public processes: The digital era should guarantee instantaneous and effective (as defined in §2.1) access to all processes for all private and public actors, CSOs and media.
- §4.2 All equal under the law: Article 7 of the Universal Declaration of Human Rights states that "All are equal before the law and are entitled without any discrimination to equal protection of the law immunity that politicians enjoy," should be revised as such immunity encourages corruption.

Eradicate Violence, Poverty and Injustice

\$5 The richest 1% owns half the world's wealth, when 1 in 10 people survive on less than \$2 a day. Inequality is trapping hundreds of millions in poverty. We have an ethical responsibility to level financial and historical injustice not only because it undermines democracy by making voices unequal, but because it powers up a bomb which will explode..

Citizenship Education

The idea of democracy is inherent in civics education, but democracy, participation, institutions, human rights, and the rule of law should not remain abstract concepts to talk about, but principles, which determine the way we live and interact with each other. Young and adult citizens alike should experience these virtues in their families, schools, neighborhoods, local communities, public and private institutions, as well as in all interactions with institutions of the state at large. Citizens should feel reassured that all institutions respect governance of the people by the people, and are accountable to citizens. Schools should practice these principles at all levels of the educational process, empowering children to participate in their own learning, choose what to learn, codesign their school environments, as well as serve the needs of their local communities in the realm of open school. Citizenship education also includes awareness campaigns about human rights, the role of citizens, incentives and mechanisms for interactions and collaborations between government, local authorities, societal organizations and agents of change. In the era of hyperconnectivity, digital literacy is of utmost importance. Especially for younger learners must learn to recognize fake media and appreciate how data manipulation can influence public opinion and disempower people.

Harness the Digital Era to design new models of Governance

- F7 The digital era has rendered all types of intermediaries obsolete. The increased connectivity, in connection with enhanced access to information, also opened up enormous new opportunities including the possibility to "connect directly" people and law making and/or decision-making processes, thus enabling large numbers of people to participate in debates and decisions. These developments also increase possibilities for disagreements and conflicts, and present new challenges.
- §7.1 New Technologies for Massive Participation: We survive as human race because we are able to solve problems. However, the challenges we face today are far too complex for any single individual to tackle them alone. There is an urgent need for technologies that enable efficient massive participation and collaboration between people as well as between machines and people; technologies that empower humans to act and operate as systems scientists (); allow them to share thoughts and interact authentically in multiple public (real and virtual) spaces; guarantee that wisdom always prevails in their choices and actions.
- §7.2 Protect the Authenticity and Anonymity of Citizens' Opinions and Choices: With increased dependence on technology, new forms of systemic vulnerabilities emerge such as hacking and stealing identities and personal data, manipulating public opinion and disempowering people through data manipulation, etc. The repartition of power and responsibility among public authorities, corporate agents, and citizens should be balanced. Research and tools to combat such threats is an absolute priority.
- §7.3 Respect and Enhance Human Cognitive Limitations: The overwhelming bombardment with information through digital screens has brought to light significant cognitive limitations in our attentional abilities! In line with the Onlife Manifesto, "Societies must protect, cherish and nurture humans' attentional capabilities." To be able to evaluate exponentially increasing options and the impact of our choices, we need artificially intelligent agents, and tools that would allow us to browse and interact not only with information, but also with simulations and projected futures that emerge depending on choices we might make.

This Manifesto is only the beginning of designing a new world that is sustainable, just and ethical,...

Scientific Grounding of the Manifesto

This short Manifesto is scientifically grounded on large-scale processing and extensive analysis of contributions from about 100 young leaders from about 50 countries who have collaborated for more than 4,000 person hours in face-to-face Structured Democratic Dialogues (SDDs), plus unaccounted number of person hours (of the same youth pioneers plus additional 1000 others referred to as "Shadow Participants") invested in peer-to-peer and/or small-group virtual interactions.

A battery of diverse scientific methodologies was applied in concert to achieve gradual data-, and idea compression until we could identify the most significant, most critical themes, which, in turn, informed and imposed the focus and content of each Paragraph (i.e., Section) of the Manifesto. The following diagram depicts a semi-quantitative model of how the results of each methodology informed our decision as to what to include in the Manifesto. The weight given to the results of each approach is reflected by the width of the arrows.

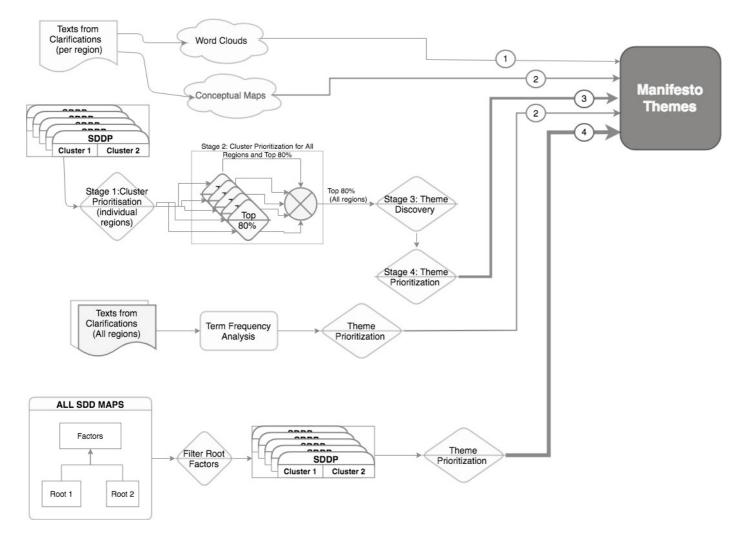

Figure 1: The five methodological approaches deployed to inform the content of the Manifesto.

The width of the arrows leaving each approach depicts the relative importance given when drafting the Manifesto.

Methodologies and Criteria used to discover themes for inclusion in the Manifesto

Five different scientific methods were deployed to inform the Manifesto. (i) Simple word clouds provided a helicopter view of the content of the debates. The thin line leaving the [Word Cloud] box, illustrates that the weight of information from word clouds in informing the Manifesto was low (in this case indicated as "1"). (ii) Term Frequency Analysis (fourth from the top in the diagram) provided a quantitative measure of how often certain terms were used. Again the thickness of the line indicates that while this information is more relevant than a simple word count (i.e., Word Clouds) it is still not the most important when it comes to deciding the themes of the Manifesto and was therefore given thickness "2". (iii) Conceptual Maps inform us how topics of interest are connected. This information was used to decide the context in which certain terms (e.g., "corruption", "online platforms", etc.) were mentioned. The results from this anlysis was given equal weight with the results from the Figure 1: The five methodological approaches used to inform the content of the Manifesto.

The width of the arrows leaving each approach depicts the relative importance given when drafting the Manifesto. (iv) The decision for identifying and choosing themes for the final Manifesto was mainly based on the results of the application of a theme discovery methodology using the clusters that emerged from the SDDs, as well as on (v) the root factors of the MAPS created during the SDD processes. For details regarding the implementation of each methodology, the reader should refer to the next sections.

The next sections provide short explanations of how each different type of analysis was implemented.

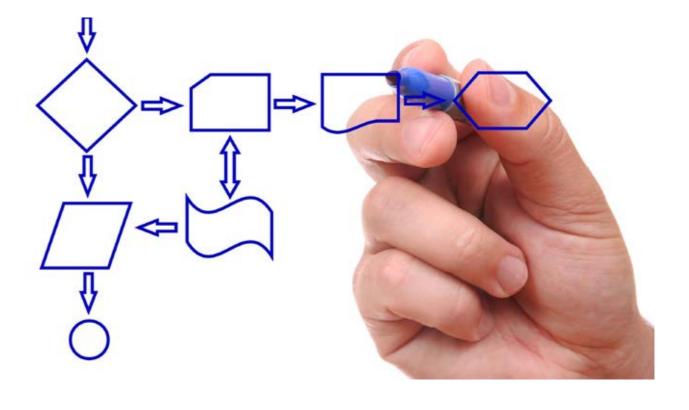

Figure 1: The five methodological approaches used to inform the content of the Manifesto.

The width of the arrows leaving each approach depicts the relative importance given when drafting the Manifesto.

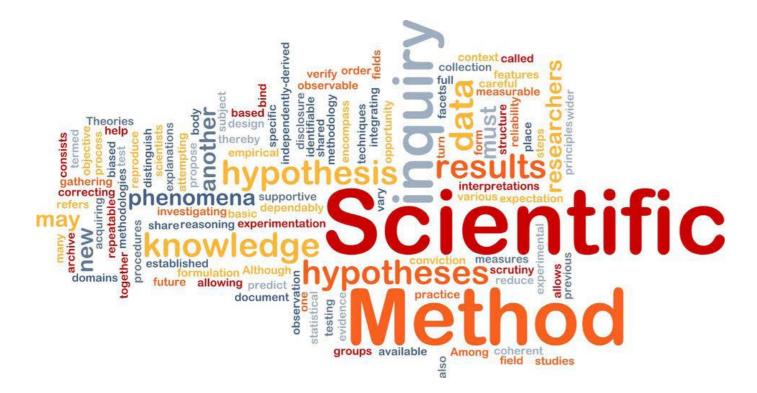

1. Word/Tag Clouds

World (Tag) cloud analysis was used to get a helicopter view, that is, a first impression of what the participants were talking about and which words were used a lot during their deliberations. We used as input, the full text provided as Clarifications for their Statements. Wherever this was not available, their video clarifications were transcribed.

Pages 28-39 document this analysis and provide short discussions and reflections by the analysts' in their effort to interpret why certain words were used more frequently than others in each region and what that might mean.

How was this used as input for the final Manifesto

Even though the most prominent tags were taken into account as themes revealing sensitivities and/or importance by the participants of the respective regions, their weight in choosing the final themes for the Manifesto was rather small (i.e., as reflected by the very thin line leaving the [Word Cloud] box in the previous illustration.

2. Conceptual Maps based on the adjacency matrix of a network

The purpose of the next level of text mining was to explore how topics of interest were connected. The reader should note that the input for this analysis were the texts from the Clarifications of the Statements across each region.

In contrast to the Word/Tag analysis, which was conducted above, this technique was used in order to discover concepts that are mentioned together. It recognizes multi-word co-occurrences. For example, if the term "Politician" is often discussed in proximity with the term "Corruption," one couldn't refrain from assuming that the participants most probably discussed the challenge of addressing corruption within the circles of people in power. Another example is the proximity of terms such as "Transparency" and "Accountability," which can be interpreted as the participants' point of view that transparency is something that relates to accountability, i.e., in this case, transparency can used used as a measure towards making political decisions more accountable to the people.

VOSviewer 1.6.6 was used to create and explore visual representations of connection of topics of interest to the participants¹. The VOSviewer software is freely available². Participant statements and clarifications were first fed to a pre-processing program called CoWo³. CoWo removes "stop words" and then through an n-gram detection approach creates a list of concept pairs. This list is prepared in a format for network analysis by VOSviewer in which it is then referred to as a co-occurrence matrix. A similarity matrix is obtained by normalizing the co-occurrence matrix using a similarity measure known as the association strength sometimes referred to as the proximity index or as the probabilistic affinity index. In this way it shows that the similarity between two items is proportional to the ratio of the observed number of co-occurrences and the expected number of co-occurrences. VOSviewer then creates a map based on the similarity matrix using a technique, which works similar to multi-dimensional scaling. It "minimizes a weighted sum of the squared Euclidean distances between all pairs of items". This is a constrained optimization problem, which is converted into an unconstrained optimization problem solved using a majorization algorithm called the SMACOF algorithm described in the multidimensional scaling literature. VOSviewer then ensures consistent results by centering the picture, maximizes variance on the horizontal dimension using Principal Component Analysis, and controls reflection. Higher similarity is associated with higher squared weight of their Euclidean distance.

The items that have high similarity are located close to each other; those with low similarity are farther apart. Modularity or 'community structure' in the graph is detected, which is sometimes referred to as 'groups', 'communities', or 'clusters' in the network analysis literature. That is nodes which are highly connected to each other, but which have lower connectivity to other nodes outside their group form a cluster. VOSviewer color codes the clusters. With respect to modeling text with graphs in this way, clusters may represent topics. For the analysis and synthesis we present the visuals in two different forms:

- One that shows the connections between the terms
- One that emphasizes only the clusters and proximity replacing individual connections with color intensities and proximities

Note: The above explanation was adapted from pages 11-13 in Nees Jan van Eck and Ludo Waltman (2009) VOSviewer: A Computer Program for Bibliometric Mapping, Erasmus Research Institute of Management (ERIM), ERS-2009-005-LIS, http://hdl.handle.net/1765/14841.

Pages 40-51 document this analysis and provide short discussions and reflections by the analysts' in their effort to interpret why certain words were used more frequently than others in each region and what that might mean.

How was this used as input for the final Manifesto

The results of this analysis were quite useful for both the discovery of themes that would become key for drafting the Manifesto, as well as for deciding how themes should be treated together (e.g., transparency and accountability). The close associations between the "hottest" (i.e., colored red) terms in the respective clouds map to the final themes selected for the Manifesto using the other methods provides additional evidence for the importance of this analysis.

3. Theme Discovery Methodology applied on Clusters

We next used a three stage approach to discover key themes using as input the names of all the Clusters created during the SDDPs. Where the names were not completely descriptive of the ideas included in that cluster, we used the specific descriptions and meanings of the ideas included in that particular cluster.

Stage 1: Cluster Prioritization

Calculation of cumulative Influence scores and votes for each cluster (per region).

Normalization of the votes and influence scores for each cluster.

Stage 2: Cluster Prioritization

Ranked the Clusters of each region, first according to Influence, and then by vote.

Selected only those clusters whose cumulative influence summed up to 80% of the total. Combine all the region's top 80% clusters.

Stage 3: Theme Discovery

The next sections describe the method applied for each stage in greater detail.

Stage 1: Cluster Prioritization for Individual Regions

The analysis required a stepwise process explained below.

Step 1

We created an excel spreadsheet with the individual clusters along with the total number of votes that the ideas in that cluster have received as well as the total influence of the same ideas. The following table illustrates the format of this tables.

| ldea | Statement | Votes | Influence |
|--------|---------------|---------------------------|-------------------------------------|
| Idea X | ldea(x) title | # of votes of Idea(x) | Influence score of Idea(x) |
| Idea Y | ldea(y) title | # of votes of Idea(y) | Influence score of Idea(y) |
| Idea Z | ldea(z) title | # of votes of Idea(z) | Influence score of Idea(z) |
| | | Total votes for Cluster 1 | Total Influence Score for Cluster 1 |

To find the Influence Scores we used the Matrix on the Map. We imported the Matrix into an excel spreadsheet and made sure to check for cycles. Then we added each row to find the number of influence per challenge.

Step 2:

Next we sorted each cluster table first by Influence, then by Vote, and then by Idea number.

Step 3:

We created a new table (see below), with cluster code (i.e. the number of the cluster in the particular region), Cluster Name, Total Votes of all ideas in that Cluster, their normalized value and their cumulative, as well as Total Influence Scores of the ideas in that cluster, their respective normalized values, and again their cumulative.

Then we sorted this table first by Normalized Total Influence Scores, then by Normalized Total Votes, and then, whenever necessary, by Cluster Number.

| Cluster # | Cluster Name | Votes | Norm. Total Cluster Votes (%) | Cumul. Votes (%) | Total Cluster Influence Score | Norm. Total Influence Score (%) | Cumul. Influence Score (%) |
|-----------|--------------|-------|----------------------------------|---------------------|-------------------------------------|------------------------------------|-------------------------------|
| 1 | [Name X] | # | % | % | # | % | % |
| 2 | [Name Y] | # | % | % | # | % | % |
| 3etc | [Name Z] | # | % | % | # | % | % |

[LEGEND]

Table exemplifying the organization of the votes and influence scores and the calculation of normalized values and their cumulative.

Step 4:

We finally used the Cumulative Influence Scores to chose those clusters that made up >80% of the total. If by that stage the cumulative votes were less that 80%, we included additional clusters so that at least 80% of the total cumulative votes were also included.

At the bottom of each column in bold are the total votes and total influences.

Stage 2: Cluster Prioritization for All Regions and Top 80%

Once cluster prioritization was complete for individual SDDPs in Stage 1, we began this next stage of analysis, compiling the clusters from ALL regions. We decided to take the clusters that comprise around 80% of the voting and influence importance, and create an excel with the top clusters from all regions, including the normative votes and influence scores. The cluster code where expressed using the Region abbreviation, Action/Challenge, number eg., AM A 2 (American Action cluster 2). The color of the Cluster number represents the color of the region.

| Cluster Code | Cluster name | Normalized Total Votes | Normalised Total Influence Scores |
|---|--------------|------------------------|--------------------------------------|
| Region abbreviation, Action/ Challenge, number | Cluster name | % | % |
| Region abbreviation, Action/ Challenge, number | Cluster name | % | % |
| Region abbreviation, Action/ Challenge, number | Cluster name | % | % |

Next we sorted the clusters first by Normalised Total Influence Scores, then by Normalized Total Votes, and if necessary by cluster number (much like we did for sorting the clusters for individual regions in stage 1). This helped us identify the most significant clusters of all the SDDs, representing the participants' corresponding ideas.

Looking at the final table, the five highest ranked clusters ended up including one cluster from each region. The most important clusters are:

African action cluster 8: Capacity building & Awareness

American Action cluster 2: Citizen participation

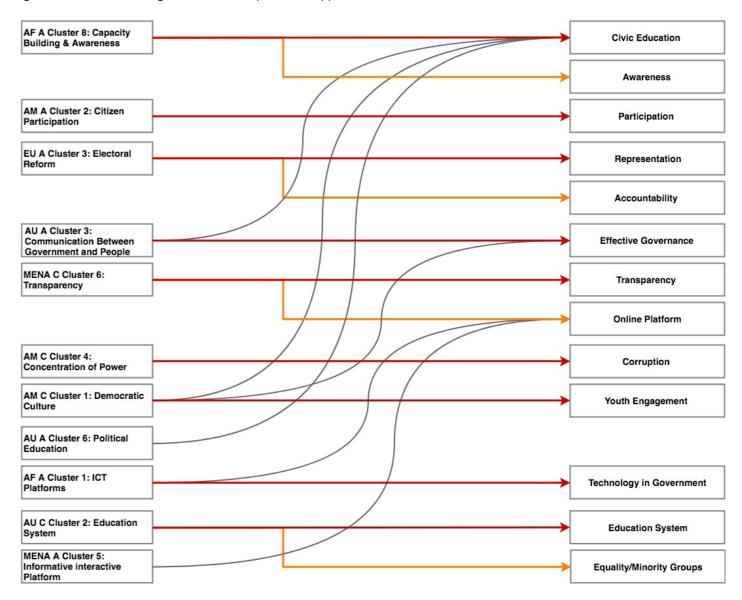

European action cluster 6 Electoral reform

Australasian action cluster 3: Communication between government and people

Middle East and Northern Africa challenge cluster 6: Transparency.

Stage 3: Theme Discovery

Once we had the list of the most important clusters from every region, we began the third stage of analysis, i.e., Theme Discovery. This was done manually, extracting the general themes from each cluster until we believed we covered all the general themes. The diagram below exemplifies the approach.

[LEGEND]

The Diagram illustrates the method by which we "discovered" themes. On the left are the Clusters as selected by the previous stages. On the right are the themes.

We applied a technique modified from the standard Agglomerative Clustering, to come up with a number of Concept Containers (i.e. Clusters) that could host the most frequently used terms. This technique is basically a "bottom up" clustering method, in which each term (starting from the top) is placed in its own Container. The naming of the container (i.e., theme) was done either using the original term (from the cluster name) or a generalisation of it to allow subsequent similar-in meaning terms to also be placed there. The meaning of was taken from the actual ideas contained in the respective cluster. As new containers (i.e., themes) were formed, they were sometimes merged if their meaning was very similar. The process was terminated when clusters on the left did not require the creation of new containers to "host" their meanings. This approach allowed us to come up with more than a dozen important themes.

The list below provides more details regarding the definitions we used for the top 13 themes discovered.

- 1. Civic education Educating people on their rights and obligations as citizens, i.e. voting, and creating general understanding of democracy and government processes.
- 2. Awareness- Promoting and engaging in democratic processes
- 3. Participation Citizen participation in the democratic process
- 4. Representation Create more equal representation of the public in government
- 5. Accountability- Holding government officials accountable to their constituents
- 6. Effective governance- This represents general government reforms, and changing or introducing new system, structures or institution
- 7. Transparency- Allow citizens access to information to keep the government accountable and to stay informed
- 8. Online platform- refers the use of websites, social media, etc. for the purpose of engaging or informing people. For example, government departments make a website to discuss policies or the use of social media to organise events.
- 9. Corruption- Abuse of powers by government officials
- 10. Youth engagement- Increase youth engagement through projects, internships, use of technologies, etc.
- 11. Technology in government- refers to specific processes in government using technology, i.e, online voting, updated administration and bureaucracy, etc.
- 12. Education system- General education reforms i.e., better education in rural areas, equal access, etc.
- 13. Equality/ minority groups (in)equalities, (in)justices, and discrimination or inclusion of minority groups i.e. women, youth, disabled or racial/religious minorities.

Once we believed we covered all the general themes discussed by the participants, we used this list in subsequent analyses.

Stage 4: Theme Prioritization using expert's opinions

In order to assign possible weights to each theme, we invited five experts to conduct an evaluation exercise. Their responses were averaged. Specifically, we asked them to consider carefully the contents of each cluster from those selected in the previous stage (always having in mind the actual participant's ideas within the respective cluster) and distribute 10 points to the themes, assigning numeric value to the themes which they thought were addressed most by the meanings in that cluster. The table below provides an example to exemplify the process.

| | | Theme 1 | T2 | тз | T4 | T5 | Т6 | T7 | Т8 | Т9 | T10 | T11 | T12 | T13 | |
|--------|-------|---------|----|----|----|----|----|----|----|----|-----|-----|-----|-----|----|
| AF A 8 | Title | 4 | | 1 | | | 3 | | 2 | | | | | | 10 |
| AM A 2 | Title | | | | 2 | | | 5 | | 1 | | 1 | | 1 | 10 |

[legend]

Five experts were asked to distribute 10 points across themes for each cluster.

How was this used as input for the final Manifesto

This analysis had a much more significant weight than those previously described in deciding key themes of the Manifesto as well as deciding the extent and depth to which each theme should be covered. The results of this analysis are illustrated in pages 54-56. As it turned out, Effective governance, Education, Transparency, Online Platforms, Participation, Corruption, Youth engagement and Accountability, received very high scores. That is why these themes were given significant attention in the drafting of the Manifesto.

4. Term Frequency Analysis

In order to explain the next type of analysis, it is necessary to distinguish between "word" and "term." A term is a word that has meaning (semantics) and most often refers to objects, ideas, events or a state of affair. A term is (in addition to being a word) a point of reference, a concept, whereas a word is only a constituent of language. Hence, term is a word that is mentioned frequently in connection with many other words. Term frequency analysis was therefore used in order to provide a quantitative measure of how often certain terms were mentioned. We used as Input for this analysis the concatenated texts from all clarifications across all regions, in contrast to the Word/Tag analysis, which was conducted separately for each region. Thus, the terms that ranked top, were terms used most frequently across all regions. For example, this analysis, ranked at the top the terms "young people," "social media," "online platform," "democratic process," and "decision making." Even with a bird eye's view, the naive observer could reasonably assume that the participants' focus and concerns centered predominantly on two themes: (a) What and how (maybe also Why, Who, and When) digital technologies should be used; (b) A significant concern is how the youth participates in democratic processes and decision making.

The raw data used for this analysis are available as Appendices pgs. 98-100

Term Frequency Methodology:

The program we used for Term Extraction is Termine¹ using the Tree Tagger program for generic text (i.e., not the standard Genia Tagger, which is specialized for Bio-Medical texts) and the theoretical grounding was based on relevant literature². This software algorithm recognizes multi-word co-occurrences. However, it uses more advanced statistical analysis to calculate the likelihood ratio for terms consisting of two or more words appearing together. The method uses the text as input to produce a list of candidate multi-word terms. These are then ordered by the degree to which a stable lexical unit is related to some domain-specific concepts, which is referred to as Score.³

The score is a domain-independent method for automatic term recognition, which combines linguistic and statistical analyses, emphasis being placed on the statistical part. The linguistic analysis enumerates all candidate terms in a given text by applying part-of-speech tagging, extracting word sequences of adjectives/nouns based, and stop-list. The statistical analysis assigns a score to a candidate term by using the following four characteristics:

- · The occurrence frequency of the candidate term
- · The frequency of the candidate term as part of other longer candidate terms
- · The number of these longer candidate terms
- · The length of the candidate term

The output list was evaluated by the analysts assuming that they are domain experts. The candidate terms were ranked according to score (Note: The first column in our tables is the rank; terms with the same score are assigned the same rank; terms that were excluded are not shown). The domain experts could scan the list starting from the top and process as many as time and money allowed. For the purposes of this analysis we present the analysis for ca. 280 terms, but for "extracting" concepts for the purposes of drafting the Manifest, we have constrained ourselves to the top 20-30.

Theme Prioritization using expert's opinions

This term frequency list was used to validate the themes discovered in the previous analyses. Similar as in pgs. 56, 61, 72, we invited five experts to conduct an evaluation exercise. Their responses were averaged. Specifically, we asked them to consider carefully the meaning of each term and distribute 10 points to the themes, assigning numeric value to the themes which they thought was addressed most by the meaning in that term. For example, the most frequently used term, "young people", corresponds with the themes participation, civic education and youth engagement.

How was this used as input for the final Manifesto

The results of this analysis were only used to confirm that the themes discovered in the the previous analysis were relevant.

Harnessing the collective wisdom of all participants

The pivotal method from all analytical approaches was the consideration of the results of the SDDPs, as these are expressed in the form of Influence Maps. We have taken the Statements from all 10 Maps that ended up at the root of the maps, i.e., those that the participants collectively considered as the most influential, and used them as input to this final analysis.

Step 1: Calculation of normalized votes and influence scores

We listed all ROOT ideas (selected the lower two levels or enough to include ½ from each MAP; in case of ideas with equal scores on the same level, all were selected) and calculated normalized values for the individual influence scores and votes of each one. The total number of the ideas selected was 60.

Step 2: Ranking of Statements

We ranked the Statements according to first by Normalized Influence Score, then by Normalized Votes and whenever necessary by the Idea Number..

Step 3: Theme Mapping and Prioritization using expert's opinions

In order to validate the discovery of the themes which took place in previous analyses we invited again five experts to conduct an evaluation exercise. Their responses were averaged. Specifically, we asked them to consider carefully the meaning of each idea and distribute 10 points to the themes, assigning numeric value to the themes which they thought was addressed most by the meaning in that idea.

The results of this analysis are illustrated in appendices pgs. 102-121, pages 62-73. As it turned out, Effective Governance, Participation, Transparency, Civic Education, Equality/Minority group, Online Platforms, and Education Systems received very high scores. That is why these themes were given significant attention in the drafting of the Manifesto.

How was this used as input for the final Manifesto

This analysis had the greatest weight in deciding not only the key themes of the Manifesto, but more importantly the depth and extent to which each of those themes should be addressed.

Structured Democratic Dialogue

The Structured Democratic Dialogue Process (SDDP) Methodology was used for the implementation of all regional dialogues. At the heart of SDDP, the Interpretive Structural Modeling algorithm is used to reduce the time that participants need in order to conclude with consensus a dialogue which reveals influence relations between pairs of ideas gradually resulting to the construction of what is called an Influence MAP. These MAPS provide a visual representation of how ideas are interrelated, with ideas at the root being the ones that exert maximum influence to those above. When the Influence MAP structures Challenges, those at the root are the key challenges. In the case of exploring actions, those at the root are considered deep drivers for change.

For about 3-4 hours participants submit single-sentence responses as well as long clarifications in responce to a specific Triggering Question. In all Co-Laboratories (this term is preferred over 'workshop' to emphasize the fact that participants explore and discover together) of this project the same two Triggering Questions have been used:

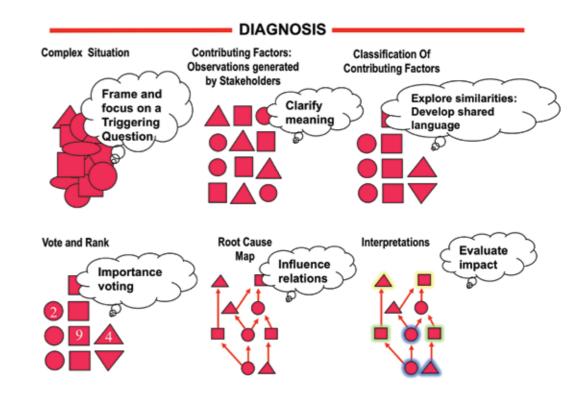

> What are key shortcomings of our current systems of governance that could be improved through technology?

What concrete action, project or product would you propose t solve a particular shortcoming of current systems of governance?

During the first few hours, other participants may ask clarification, but no judgment questions. A bottom-up approach is subsequently applied to cluster all Statements into groups according to similarity and then participants are asked to choose the five they consider most important. The Statements that receive two or more votes enter the final discussion in which participants explore influence relations such as:

> If we make progress in addressing Challenge (or Action) X Will this help us SIGNIFICANTLY address Challenge (or Action) Y?

Since the number of combinations is in the order of several hundrents, the ISM algorithm is applied to reduce them to less than one to two hundreds using inductive logic, thus making it possible for the participants to explore the full spectrum of the issue. The result is an Influence Map, which is a tree structure that represents the collective wisdom of the participants and their consensus as to which Challenges (or Actions) are the most influential, i.e., ideas that end up at the root of the map are much more influential when it comes to addressing the overall challenge (or action).

In the results section, we provide all Influence Maps along with their corresponding root factors, i.e., those ideas that the collective wisdom of the participants (following a structured face-to-face process of ca. 800 person hours per region) placed them at the root of the tree. As explained previously, because this process is very rigorous and highly participatory (i.e., harnessing collective wisdom to generate consensus), these factors have been given higher priority when feeding concepts to the Manifesto.

For the European region, "information", "technology" and "participate" were hot topics, expressing need for participation and the participants desire for greater access to information through technology. Concepts such as "citizens", "people" and "public" are common concepts, highlighting the importance of people at the center of democracy. "System", "process" and "order" were can also be seen in the word cloud, suggesting the prioritization of efficient governance. "Responsibility", "active", "engaged" and "involved" were found many times in the European text, suggesting the importance of civic duties and participation. Lastly, "digital" and "online" also show the importance of technology in democracy.

"Order", "citizens" and "system" were mentioned often within the participants text, suggesting efficient government. "youth", "media", and "online" were the other main topics of conversation. This suggest that the engagement and involvement of youth through the use of social media is important.

The concepts of "process" and "citizens" were mentioned often in the African text. "Rights" and "power" were also hot topics, suggesting the challenge of corruption and lack of transparency. Also along the same concept of transparency, "access" and "participate" can distinctly be seen in the word cloud. The synonymous concepts of "electoral" and "elected" express the participants desire for greater representation or possible electoral reform. "Youth", and "media" were the other main topics of conversation. This suggest that the engagement and involvement of youth through the use of social media is important.

This word cloud for African Actions shows this region's very keen in technology, "ICT", "mobile", "media" all are prominent on the map. "Access" and "power" are both frequently used terms, suggesting the need for transparency to combat corruption. Lastly, this region understands the importance of involving young people, as seen with the concepts of "student", "youth", and "young".

The word "world" and "fight" only appear in the MENA context, this may suggest the international challenges to democracies in the Middle East. The mention of "rights" also stands out in comparison to other regions. "Youth" and "women" and "accessibility" are mentioned often, highlighting the need of participation of minority groups and equal access to government. "Digital" and "online" also are key terms that show the need for technology.

Much like the MENA challenges, "world" is a concept that was discussed really only in this region. The topics of "law", "court" and system" express the need for systemic change in the region. "Access", "online", and "digital" again, suggest the use of technology to increase transparency.

RIGHTS DIGITAL FIGHT WOMEN ONLINE POLITICAL ONLINE SYSTEM ACCESS LAW

networks promote

personal national servants Other than the most common words of "public/ people", the word "participation" stands out in America compared to the other regions. The words "communication" and "mechanisms" also appear comparatively frequently and suggest the need for systemic changes in the region. The topics of "social", "projects" and "young" suggest the need for societal participation and engagement of the youth.

"Participation" and "social" are words distinguished with respect to frequency and do not appear so prominently in other regions. "Virtual" seems to be a synonym for technology, which can also be seen in "media". "Education" and "youth" are two concepts that are important to participant of America. "Corruption" and "information" also were hot topics of the discussion.

"Education" stands out most in this region. Use of the words "groups", "community", "system" and "society" seems indicative of the culture and the importance of society as a whole. "Technology" and "development" were also important to the participants of Australasia, highlighting the importance of progress with regards to technology and democracy.

"System", "process", "public" and "technology" appear more frequently than in other groups. "Communities" and "groups" are also very relevant in this region. "Behaviour", "future" and "leadership" are topics that seem to be specific to the Australasian context.

2. Conceptual Maps based on the adjacency matrix of a network

| Democratic | §2, §2.4, §5, §6 |
|------------|-------------------------------------|
| Politician | §3, §3.2, §3.3, §3.4, §4 |
| Digital | §3.1, §3.2, §4.1, §6, §7, §7.3 |
| Corruption | §2, §4, §4.1, §4.2 |
| Public | §1, §2, §4, §7.1, §7.2 |
| Law | §2.1, §2.2, §2.3, §3.3, §3.4 §4, §5 |

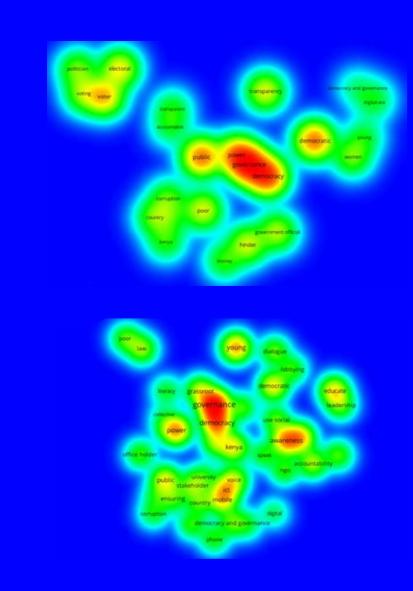

For the participants of the European dialogue, in the challenges infographic the terms "Politician" and "Democratic" appear as their key concerns. Noticeable is the short distance between the terms "corruption" and "politician." The meaning of this proximity is that these two terms are often used together. It reflects the participants' frustration with corrupt politicians. Almost on the same island, closely related to "politician" are the terms "democratic," "public," "democracy," and "civic." "Digital" almost overlaps the term "public." The term "transparency" is also closely related to both these terms, perhaps suggesting actions to increase transparency in an effort to combat political corruption and empower the public with access to more information. "Digital" and "public" are also closely related, showing the participants' ideas of how increasing the use of digital technologies could support the informing and engaging of the public. This proximity between "digital" and "public" is found in most regions, reinforcing the goal of the project, to reinvent democracy in the digital era. The Actions infographic is richer featuring multiple hot terms in separate island. "Law," "young," and "volunteer" are close together. Below the terms "obligatory," and "educate," in close proximity to "political education" pin point to the need for actions in citizenship and peace education. "Democracy," "mediation," and "transparency"

governmenta

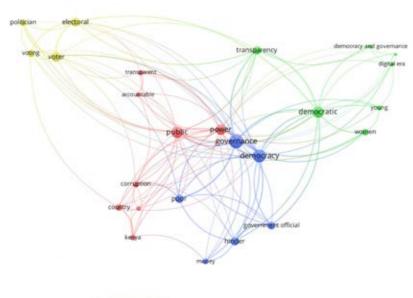

are in close proximity and interconnected, revealing the views of the European participants on how these concepts are inter-related and in their minds they belong together. Three terms that relate to civil society, i.e., "ngo," governmental," and "help citizen" reveal their interest in seeing civil society becoming stronger and work close together with government. On the right side, the term "public" is connected to :accessible" and "organize, as well as to "voter" and "voting".

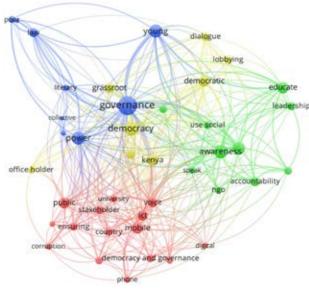

In sum, the European participants appear to be as concerned about political corruption as participants of other regions. They, too, see a better future being shaped by the younger generations and adhering more to the law. The frequent appearance of the term "obligatory" reveals a concern that Europe might have given its citizens too many freedoms! They highlight the importance of civil society shaping the public sphere, with transparency and transparency and softer methods of resolving conflicts such as mediation.

Mapping key terms to the Manifesto: The Table on the left provides a quick reference on where in the Manifesto each area of concern or priority (i.e., term) has been treated.

| Democratic | §2, §2.4, §5, §6 |
|-------------------|--------------------------------|
| Governance | §1, §2, §3, §3.1, §3.2, §6, §7 |
| Transparency | §3.2, §4, §4.1 |
| Accountability | §3, §3.3, §3.4, §4, §6 |
| Corruption, money | §2, §4, §4.1, §4.2 |
| Inequality | §1, §5 |
| Electoral | §2.3, §3.3, §3.4 |
| Digital | §3.1, §3.2, §4.1, §6, §7, §7.3 |

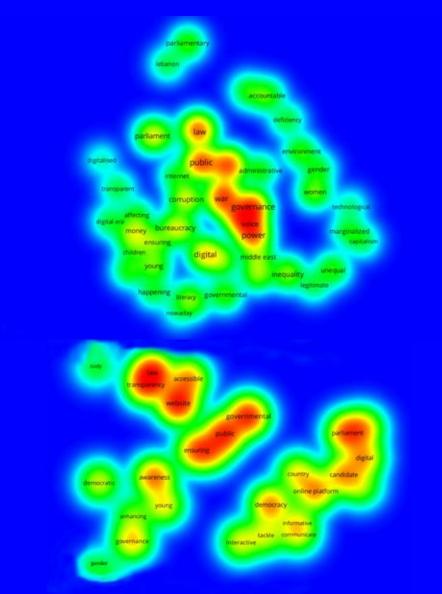

"Democracy", "Governance" and "Power" are seen as key issues in the African Region. Closely related to these issues, are "transparency" and "accountability". The close relationship signifies the importance of transparency and accountability for good governance and democracy. Terms relating to the election process, including "electoral", "voting" and "voter" are closely related to politician, and connected with both "transparent" and "transparency". Again, this shows the participants desire for greater transparency in a number of governing processes.

The Actions infographic is richer featuring multiple hot terms in separate island, "Governance", "democracy" and "power" are central, similar to the challenge infographic. Another hub of terms is centralized around "stakeholder", "university", "public" and "voice". This suggested that the general public should have a stronger voice, including all stakeholders (old and young). When looking at the content, "the poor", "women" and "young" often are mentioned in the context of inequality and being under represented. These terms related to inequality are also closely related to "corruption", suggesting the connection of inequality being driven by corruption, but can be improved by "transparency" and "accountability" (also closely related, as pictured). "Educate" and "leadership" are very close together, establishing their co-occurrence, this reflects the participants interest

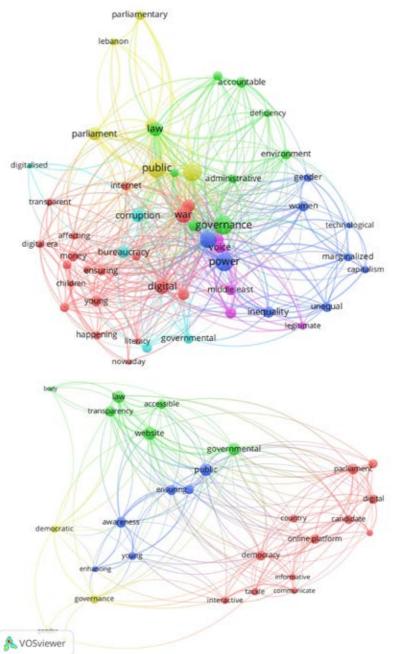

in increasing both general education as well as citizenship and political education in order to inform tomorrow's leaders. More distantly related are the ideas of "digital issues", "ICT", "mobile", and "use social" (media). All of these terms relating to technology highlight the participant's ideas for progress in government, i.e. mobile voting, as well as using technologies to better education and inform citizens through social media or government websites.

We can conclude that the participants from the the African dialogue believe that the concepts of democracy and good governance need to be reinforced primarily by greater transparency and equality, then though structural and institutional changes, such as in the electoral system and digital issues.

Mapping key terms to the Manifesto: The Table on the left provides a quick reference on where in the Manifesto each area of concern or priority (i.e., term) has been treated.

| Governance | §3 |
|---------------------------|---|
| War | §5 |
| Power | § 3.3, § 3.4, § 4.2 |
| Voice | § 1, § 2, § 6, § 7.1, § 7.2 |
| Public | § 1, § 2, § 4, § 7.1, § 7.2 |
| Law | § 2.1 § 2.2, § 2.3, § 3.3, § 3.4, § 4, § 5 |
| Digital | § 2.2, § 2.3, § 3.1, § 3.3, § 4.1, § 6, § 7 |
| Bureaucracy | § 3, § 4.1 |
| Corruption, Money | § 4 |
| Inequality, Women, Gender | §5 |
| Environment | §1 |
| Accountability | § 3.4, § 4 |

The hot topics for the participants of the Middle East and North Africa (MENA Region) dialogue on challenges, were around the terms: "power," "governance," "war," "voice," "public," "law," and "digital." The intensity of connections between terms in general is remarkable, especially for the terms "digital," and "governance." The terms "power"

and "voice" are densely interconnected to "gender," "women," "inequality," "unequal," and "marginalised," highlighting the fact that women are virtually excluded from politics and decision making processes. Examining the actual original clarification texts, reveals that the meaning of some terms like "public," governance," and "law" is in many cases different from the meaning of the same terms in other regional dialogues, e.g., "public" for Europeans refers to public (real and virtual) spheres, for latin Americans it refers to the interests of the masses, while for Asians the term is less frequent and had a different connotation. The term "digital," along with terms such as "bureaucracy," "corruption," and "money," are close to the central concerns. Everything else appears to be more or less of equal importance, i.e., this region's network shows a greater variety of concerns at comparable frequencies. Also closely related to the central issues are issues related to "inequality" (below), "women", "gender," "environment," and "accountability" (on the right side). Looking at the actions infographics and connectivity maps, hot terms include again "government" and "public," but now also three key terms that pinpoint the rule of law (law, transparency, parliament), as well as multiple terms that have to do with digital era (e.g., accessible, website, ensuring, interactive, online platform, digital)

The appearance of terms like "digital," online platform," "interactive," and "informative" close to (and/or on the same island) the hot term "parliament" could be interpreted as the participants' vision and demand for harnessing digital opportunities in electoral and accountability challenges, thus aiming better models of governance with less corruption.

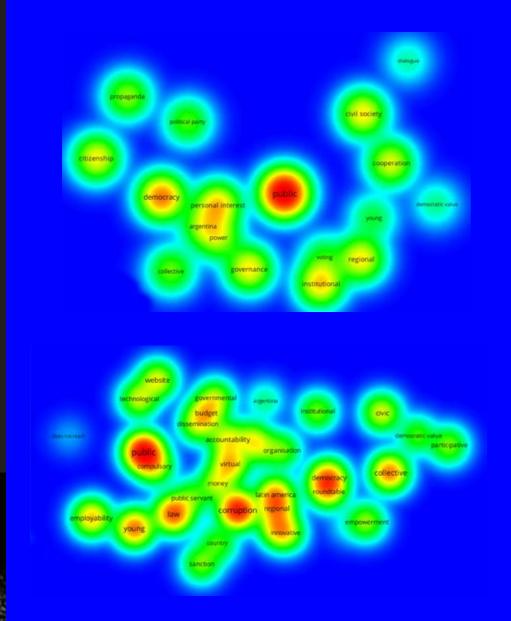

Finally, noteworthy is also the fact that the islands of connections are more connected between them than those of other regions.

In sum, the greatest concerns of the MENA participants appear to be related to issues of power and corruption, war and injustices (gender, inequalities, marginalisation).

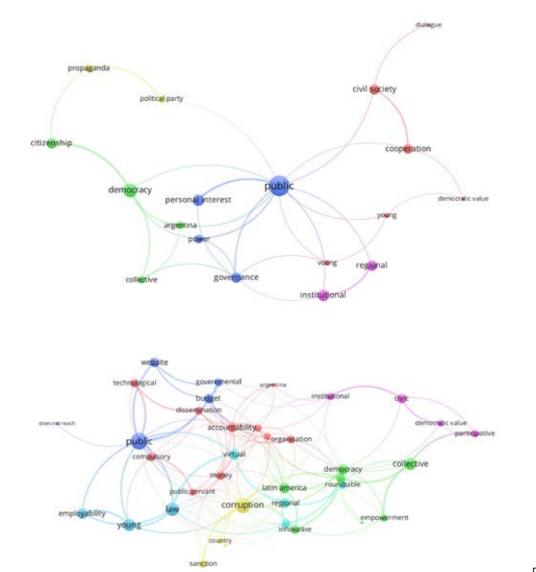

Mapping key terms to the Manifesto: The Table on the left provides a quick reference on where in the Manifesto each area of concern or priority (i.e., term) has been treated.

If this fills the space, then all should be expanded along these lines. The content of course needs to be carefully thought and to make political and regional sense

| Public: | §1, §2, §4, §7.1, §7.2 |
|-----------------|--------------------------------------|
| Democracy: | §2, §2.4, §5, §6 |
| Corruption: | §2, §4, §4.1, §4.2 |
| Citizen(ship): | §1, §2.2, §3.1, §3.3, §4.1, §6, §7.2 |
| Civil Society: | §1, §2.4, §7.3 |
| Institutions: | §6 |
| Power: | §3.3, §3.4, §4.2 |
| Vote/ Election: | §2, §2.3, §3.3, §3.4 |

The American regions challenge infographic is not as populated as the action graphic, and all terms seem to be related to "Public". This is can be interpreted as the participants understanding that democracy in the region can and must be for the public and influenced by greater public participation. Other issues of importance are "democracy" and "cooperation". Smaller centres related to public are "citizenship", "civil society" and "institutional". This reflects the American participant's desire for a more active civil society, participation and cooperation. Citizenship also was often used in the context of educating people on their rights as citizens and how to participate effectively. When the public is better educated on their citizen rights and obligation, they are able to make informed decisions and express greater interest in political issues. The terms "personal interest" and "power" and closely related, similarly related are "propaganda" and "political party". This

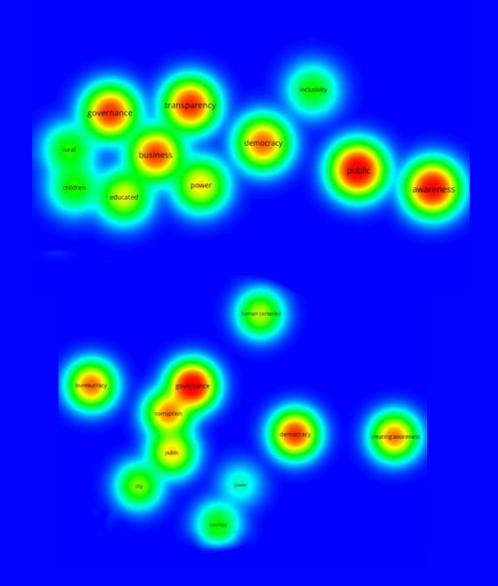

suggests that corruption of individual politicians and parties are challenging democracy.

In the action network, "corruption", "money", "public servant" and "sanctions" co-occur in the text often, implying the participants longing to fight corruption. "Young", "law", "compulsory" and "public" are seen in a group and suggest that need for laws making compulsory public participation and the inclusion of the youth. In the text this idea is often expressed in the form of compulsory voting.

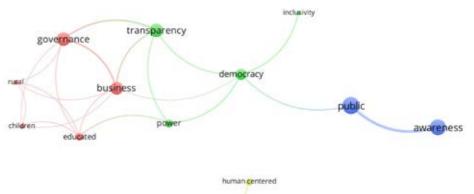

The American dialogue seems to have the most discussion about specific technologies and innovation that can and should be used, with terms like "website", "technological", "virtual", and "innovation" found often in the text. Notice the connections between "dissemination", "accountability" and "technological", suggesting that technologies can be used to increase transparency and hold politicians accountable. This can be done through government publishing all data online, using social media to keep voters informed or even systems of online communication between the public and officials. Again, this reflects the main goal of this dialogue, purpose actions to reinvent democracy in the digital era.

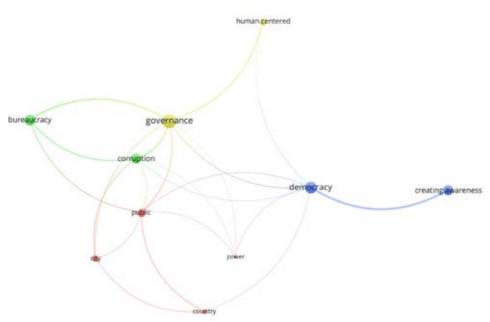

In conclusion, the main concerns of the American region relate to greater public participation, education and the use of technologies in governance.

Mapping key terms to the Manifesto: The Table on the left provides a quick reference on where in the Manifesto each area of concern or priority (i.e., term) has been treated.

| Public: | §1, §2, §4, §7.1, §7.2 |
|---------------|--------------------------------|
| Democracy: | §2, §2.4, §5, §6 |
| Transparency: | §3.2, §4, §4.1 |
| Business: ? | |
| Governance: | §1, §2, §3, §3.1, §3.2, §6, §7 |
| Power: | §3.3, §3.4, §4.2 |
| Bureaucracy: | §3, §4.1 |
| Corruption: | §2, §4, §4.1, §4.2 |

For the Australasian region, "transparency", "democracy" and "governance" are key issues. Other orbiting factors include "business" and "public". It is interesting to note that business is not a central issue in other regions, this highlights the different style of democracy and governance in the Asian region that has a strong focus on economics.

Note the connection between "corruption" and "bureaucracy", similar to other regions, stressing the participant's frustration with injustices and their suggested actions to fight corruption.

"Educated" is also a term used frequently within the text, most often in the context of education citizens about their rights and obligations. Education is also used in the context of fighting inequality in rural areas.

3. Theme Discovery using Clusters from all Regions

The method is described in detail in section "3. Theme Discovery Methodology applied on Clusters". The results of Stage 1 analysis are shown in 10 separate tables in the Appendixes pgs. x-y. In each page, the cluster prioritization for individual regions is shown along with a table which shows those clusters which produce the top 80% of the cumulative influence. The Table shown here is the result of the Stage 2 analysis. The application of Stage 3 analysis provided us with 13 new "containers" (i.e., Clusters). The exact themes that resulted from this are shown in the methodology section in pg 19. In order to extract the relative importance of the these "containers" we applied the analysis referred to as Stage 4. The summary Table shows that Effective Governance (72 points), Education System (61 points), Transparency (53 points) followed by three themes that scored almost the same (Online Platforms, Participation, Corruption and Youth Engagement.

| Cluster# | Cluster name | Norm. Votes | Norm. Influence |

4. Term Frequency Analysis

4. Term Frequency Analysis

The method is described in detail in section "3. Theme Discovery Methodology applied on Clusters". The raw data are shown in the Appendix in pg. X

The Table below show the 57 top terms that scored 4 and above. Five experts scored the relative contribution of each of these terms towards the themes discovered in the previous analysis. The "Theme Scores from Term Frequency" table summarizes these results, which look surprisingly similar to the summary results of the previous analysis. Here Effective Governance (79 points), Participation (65 points), Transparency (51 points), Youth Engagement (50 points).

| Rank | Term | Score |

5. Analysis using the Root Factors from the SDDs

5. Analysis using the Root Factors from the SDDs

In Step 1 we calculated normalized values for the individual influence scores and votes of each of the root factors for a total number of 60. These 60 were mapped and scored to the Thems discovered in Analysis 2 and scored by 5 experts. The Table Theme Scores from Root Ideas" summarizes the theme prioritization results. Again the results are surprisingly similar with minor changes of order. Here again Effective Governance (71 points), Participation (60 points) and Transparency (56 points) received the top scores. In this analysis themes related to education ranked higher (Civic Education, 54 points, and Education System, 47 points), as well as Equality/Minority issues (51 points). Among the remaining themes, Online Platforms, Corruption and Technology in Governance again scored high. 5. Analysis using the Root Factors from the SDDs

In Step 1 we calculated normalized values for the individual influence scores and votes of each of the root factors for a total number of 60. These 60 were mapped and scored to the Thems discovered in Analysis 2 and scored by 5 experts. The Table Theme Scores from Root Ideas" summarizes the theme prioritization results. Again the results are surprisingly similar with minor changes of order. Here again Effective Governance (71 points), Participation (60 points) and Transparency (56 points) received the top scores. In this analysis themes related to education ranked higher (Civic Education, 54 points, and Education System, 47 points), as well as Equality/Minority issues (51 points). Among the remaining themes, Online Platforms, Corruption and Technology in Governance again scored high.

- #24: Public does not understand what is the decision-making process in the government
- #5: Government lacks the will to inform the citizens about the state of affairs without adding propaganda
- #38: Big Corruption
- #50: Citizens are not represented by the politicians they have elected
- #6: Lack of mindfulness in decision making
- #1: Lack of possibility to vote in elections online

- #34: Deficiency in the process of raising awareness around the rights of citizens
- #45: Lack of women's engagement in politics
- #30: Absence of meritocracy in governmental institution
- #18: Corruption

- #1: Lack of consciousness of citizens that can they participate in issues of democracy and governance,
- #10: Rampant run-away impunity among key government officers on public utilities
- #16: Inadequate orientation to the reforming of democratic systems and structures and an improvement in policy making
- #8: Non existence of the right to information
- #13: Limited public access to information on two levels
- #29: Poor infrastructure, negative ethnicity and historical injustices
- #26: Brutality of governments to those who speak about democracy

- #37: Limited use of and resistance to new technologies in public administration processes.

 (Poco uso y resistencia a nuevas tecnologias en los procesos de la administracion publica)
- #25: Lack of knowledge about the local reality (Falta de conocimiento total sobre la realidad local).
- #35: Centralization of public power in a single person or a small group (non-elected) (Centralizacion del poder publico en una sola persona o un pequeño grupo (noelectos)
- #4: They are based on democratic systems controlled by the same elites and promote inequality (Que se fundamentan en sistemas democraticos secuestrados por las mismas elites y promueven la desigualdad).
- #18: Normalization and acceptance of political corruption. (Normalizacion y aceptacion de la corrupcion política).
- #39: Inefficient education for democracy and for the exercise of citizenship (Deficiencia de una educacion para la democracia y para el ejercicio responsable para la ciudadanía).

- #13: Quality Education
- #7: Lack of use of technology to engage youth
- #17: Intolerance
- #16: Women are not represented adequately in the Indian Democracy
- #2: Lack of proper education
- #6: Right to information for citizens

Selection of Key Actions

The following sub-sections summarize the actions at the root of each region's Influence Map.

- #16: Ensuring that the right to participation is a constitutional right
- #39: Online consultation portal for law proposals
- #20: Online voting in elections
- #10 Changing electoral laws
- #48: Implement liquid democracy
- #37: Publishing government data online to increase transparency
- #41: Increase the role of NGOs

- #14: Online interactive and fun platform dedicated in addressing the issues related to the youth's engagement in politics as well as the enhancing of awareness regarding the rights of citizens
- #1: Mandatory participation in political youth centers during high schools
- #58: Awareness campaigns about human rights and the role of citizens
- #56: Creating monitoring and evaluation system in work places and governmental institutions
- #55: Development of effective supporting units
- #52: Create a platform where independent candidates can share their programs and views

- #18: Economic Empowerment Of The Less Advantaged
- #26: Engage Legal Practitioners And Experts To Come Out With An Extensive Legal Framework On The Right To Information
- #45: Develop A System Or A Tool Using ICT To Make Information Easily Accessible To All
- #34: Increase Literacy Among Citizens In Rural Areas Through
 The Use Of Change Agents

- #22: Initiate models of discussion of the law and the media existing in different levels and years of education (Iniciar modelos de discusion de proyectos de ley, mediaticos, actuales en los distintos niveles y años educativos).
- #15: Develop an exchange platform with services offered to save the world (Desarrollar una plataforma de intercambio donde se ofrescan servicios para salvar al mundo).
- #52: To work together with social organizations (Trabajar en conjunto con organizaciones sociales).
- #78: Create a citizen dialogue for solving problems. (Crear un dialogo ciudadano para la solucion de problemas).
- #45: Create a project to promote citizen participation through alternative mechanisms (Crear un proyecto para fomentar la participacion ciudadana a traves de mecanimos alternativos).
- #33: Application of a participatory budget at the neighborhood level (Aplicacion de un presupuesto participativo a nivel barrio).

- #31: Educate people about their rights
- #3: Develop two way communication between citizens and government
- #32: Government must interact more with the people
- #30: Inclusive youth development
- #10: Online courses for facilitating education in rural areas

Concepts to Factors Associations
The last method of analysis and synthesis involved the generation of associations between the emerging key concepts (from all previous processes) and factors (across all regional data) as contributed originally by the participants. These associations were created by domain experts.

| Challenges | Root Factors | Other Factors |
|------------------------------|--|---|
| Civic Education | MENA34, AF1, AM39 | AM13, AM39, EU10, EU28, MENA1, MENA32 |

Democracy in the Digital Era: Manifesto

Cluster Prioritization Analysis - Actions

| | Cluster 1: International Impact | | |
|------|---|-------|-----------|
| Idea | Statements | Votes | Influence |
| 1 | Mandatory participation in political youth centers during high schools | 3 | |
| 33 | Partnership with international and local bodies for the information in development | 0 | |
| 38 | Stop exploitation of developing countries by the economically powerful states | 0 | |
| | | 3 | 0 |
| | Cluster 2: Job matching software | | |
| Idea | Statements | Votes | Influence |
| | Create a job matching software for students that is relevant to their field and flexible to their schedules, eliminating the bias of gender, sex, religion, race and other diversity | | |
| 49 | factors | 2 | 1 |
| 11 | Automatic selection of potential candidates in the job recruitment process | 2 | |
| 3 | Use digitized standardized matching system to recruit governmental employees and representatives | 1 | |
| 51 | Creating a website that helps youth in finding job opportunities in return for engaging in debates in their field of study | 1 | |
| | A social networking platform for volunteers / youths looking for opportunities posted by | | |
| 2 | nonprofits and government agencies A better system of governance would be through the people we recruit to work at such | 0 | |
| 42 | big positions at the government | 0 | |
| | | 6 | 1 |
| | Cluster 3: Social Reconstruction | | |
| Idea | Statements | Votes | Influence |
| 18 | Resistance to the patriarchal system and trying to find some new form of governance | 0 | |
| 36 | Formulating regulations by government that focus on implementing gender equality | 0 | |
| | | 0 | 0 |
| | Cluster 4: Role of Media | | |
| Idea | Statements | Votes | Influence |
| 8 | Opening an independent and educational TV channel to reach rural areas and villages | 1 | 2 |
| 44 | Ensuring media participation in human rights awareness campaigns | 2 | |
| 23 | Establishing media ethical declaration to generalize for all media agencies | 0 | |
| | | 3 | 2 |
| | Cluster 5: Informative interactive platform | | |
| Idea | Statements | Votes | Influence |
| | Online interactive and fun platform dedicated in addressing the issues related to the | | |
| 14 | youth's engagement in politics as well as the enhancing of awareness regarding the rights of citizens | 6 | 14 |
| 20 | Creating an online platform that easily explains the different formal tools youth can use to issue a complaint to the parliament | 7 | 1 |
| | Creating an online platform for citizens to voice their concerns, that will categorize them | • | |
| 29 | into a clear database, to be addressed by the government in the upcoming parliamentary sessions | 1 | |
| 47 | Online weekly survey platform where citizens vote on articles to be discussed in the parliament's next session | 1 | |
| | Social media platform that does not interact with, but rather informs citizens of their | | |
| 7 | rights and the structures of their government. Establish online platform of social media on activism and expression of ideas, it will also | 0 | |
| 13 | offer training 20 people related to activism in the middle east | 0 | |
| 15 | Create a digital independent press board | 0 | |
| 25 | Creating a network of advocates for minorities and marginalized groups Creating an online platform for youth all around the world to share thoughts on | 0 | |
| 40 | democracy and challenges they face | 0 | |
| 43 | Launch online platforms for communication with the public | 0 | 45 |
| | | 15 | 15 |
| | Cluster 7: Constitutional reform | | |
| Idea | Statements | Votes | Influence |
| 58 | Awareness campaigns about human rights and the role of citizens | 6 | 9 |
| 10 | Create a constitutional court independent from the government that ensures respect of the constitution and fundamental rights | 5 | 1 |
| 31 | Organizing online sessions of Q&As on the rights of citizens | 2 | |
| 26 | Reforming the basic law or constitution in a way that guarantees the political, social and economic rights | 1 | |
| | | 0 | |
| 27 | A parallel independent consultation body to explain the limitations of the constitution | U | |

| | Charter 0. Political 9 sinia advection | | |
|------------|--|------------|----------------|

Cluster Prioritization Analysis - Shortcomings

| | Cluster 1: Democratic culture | | |
|------|---|------------|-----------|
| Idea | Statements | Votes | Influence |
| 18 | Normalization and acceptance of political corruption | 5 | 13 |
| 39 | Inefficient education for democracy and for the exercise of citizenship. | 5 | 13 |
| 19 | They only vote, forgetting of social control | 1 | |
| 40 | Discrimination in social groups' opinions | 1 | |
| 52 | Improvised nomination of public servants designated in the implementation areas | 1 | |
| | There is too much distance between the people and the decisions made by the | | |
| 1 | government | 0 | |
| 13 | Deficiency in reestablishing democratic values within the educational system. | 0 | |
| 34 | Justice systems based solely on punishment. | 0 | |
| 49 | It is based on the selfish logic of "if I win, someone else has to lose" | 0 | |
| 50 | Scarce multi-stakeholder dialogue in decision-making | 0 | |
| | | 13 | 26 |
| | Cluster 2: Citizen participation | | |
| Idea | Statements | Votes | Influence |
| | The elections are to choose people and do not promote the discussion of ideas | | |
| 46 | and projects | 2 | 3 |
| 30 | Low citizen participation, especially among young people. | 1 | 2 |
| 40 | Lack of communication by the State concerning the necessary information for | | |
| 43 | solving social problems | 1 | |
| 66 | Lack of a direct citizen participation institution. | 1 | |
| 1 | There is too much distance between the people and the decisions made by the government | 0 | |
| 5 | Closure of spaces for citizens in local decision-making | 0 | |
| 3 | Excess of political activism in social media but lack of real activism through | O | |
| 23 | institutional mechanisms. | 0 | |
| | Distance between people and decision-making and decision-implementation | | |
| 31 | creates disinterest for public affairs | 0 | |
| 47 | Lack of cooperation with different forms of the civil society organisations | 0 | |
| 68 | There is no correlation between the problems addressed by the Government and the ones sought by the civil society. | 0 | |
| 00 | and drive deaging by and drive desirety. | 5 | 5 |
| | | | |
| | Cluster 3: Selection process for public officials | | |
| Idea | Statements | Votes | Influence |
| 2 | Inadequate method of entering the public administrative system | 2 | 1 |
| 27 | Inadequate diagnosis of citizens' priorities. | 1 | |
| 47 | Wrongful nominations in decision-making positions, due to the lack of knowledge | • | |
| 17 | of the people chosen in the respective positions. | 0 | |
| 58 | Members of the staff don't know each other | 0 | |
| 61 | Lack of competitions to accede to publico offices or lack of dissemination of those competitions. | 0 | |
| | · | 3 | 1 |
| | | | |
| Idea | Cluster 4: Concentration of power Statements | Votes | Influence |
| 35 | | votes 6 | 13 |
| 55 | Centralization of public power in a single person or a small group (non elected) They are based on democratic systems controlled by the same elites that | U | 13 |
| 4 | promote inequality | 3 | 13 |
| 33 | Manipulation of the public opinion through the means of communication in favor of a political position | 2 | 1 |
| | There is no safeguard for the political participation of actors with opposing points | | |
| 11 | of views to those already established | 1 | |
| 56 | The participation of new political actors is not encouraged. | 1 | |
| | Excessive use of political marketing that reduces politics in a single photo. | 1 | |
| 69 | Executive doe of political marketing that reduced politice in a single pricte. | | |

| | Cluster 5: Ineffective administration | | |
